# The LLVM compiler framework Welcome & Course Outline

Daniele Cattaneo

Politecnico di Milano

2020-04-27

# About the dragon

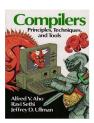

► The **LLVM logo** [1] is a stylized wyvern (a kind of dragon).

Dragons have connotations of power, speed and intelligence, and can also be sleek, elegant, and modular (err, maybe not).

# About the dragon

- ► The LLVM logo [1] is a stylized wyvern (a kind of dragon).
  Dragons have connotations of power, speed and intelligence, and can also be sleek, elegant, and modular (err, maybe not).
- ► There is a famous **compiler book** dating back to the 1970s with cover art featuring a knight fighting a dragon. [2]

  After all, compilers are also **scary**...

# About LLVM

The idea behind LLVM is that compilers should **NOT** be scary!

Instead, they should be **easy** to extend and hack at your leisure.

In this course we will see how to have fun with compilers, instead of being scared of them.

### About me

### Daniele Cattaneo

- ► daniele.cattaneo@polimi.it
- ► PhD candidate @ Politecnico di Milano (Italy)
- Obsessed with compilers for a long time...
- ...now working on research projects with LLVM!
- ► (yes I have strange tastes, I know)

# **About you**

In order to fully understand the content of this course, you should have:

- knowledge of what a compiler is
- proficiency in the most common data structures
- ► proficiency in Object-Oriented Programming
- ▶ at least some experience with C++

That's it!

### **About the course**

# 1. First part

- ▶ Compiler design
- ► LLVM structure overview
- ► LLVM-IR language

# 2. Second part

- ▶ LLVM Documentation
- ► Available middle-end passes (overview)
  - ▶ Normalization
  - Analysis
- ► LLVM quick start tutorial (depending on time)

### Goal of the course

At the end of these lectures you will (hopefully) be able to:

- understand the LLVM compiler infrastructure
- ► read a .ll file (LLVM-IR)
- know where to look for documentation
- know which middle-end weapons LLVM provides you, out of the box
- know how to implement a simple analysis / transformation
- know how to test your code

# Bibliography I

Apple Inc. Llvm logo. http://llvm.org/Logo.html.

Alfred V. Aho and Jeffrey D. Ullman.

Principles of Compiler Design (Addison-Wesley Series in Computer Science and Information Processing).

Addison-Wesley Longman Publishing Co., Inc., Boston, MA, USA, 1977.
